Powering a Smarter Community

Oakden Rise has been designed with one of South Australia's most innovative residential electricity networks.

Rather than relying solely on traditional electricity infrastructure, Oakden Rise features a purpose built Community Energy Network owned and operated by Sustainable Asset Co and retail energy supplied by ASENSO through Oakden Rise Community Energy Co, an Authorised Electricity Retailer.

This modern approach provides reliable electricity today while creating the foundation for cleaner energy and future technologies as the community grows.

A Modern Approach to Energy

Traditional suburbs rely on electricity infrastructure that has evolved over many decades. At Oakden Rise, the community electricity network has been purpose built specifically for the development, providing greater flexibility to support future energy technologies while remaining connected to South Australia's broader electricity grid for ongoing reliability. The result is a smarter, more sustainable energy solution designed for modern living.

Why it Matters

100% GreenPower included. Every home is supplied with accredited 100% GreenPower sourced from the Lake Bonney Wind Farm in South Australia. There is no additional cost for choosing renewable energy.

Market Competitive Electricity

Residents benefit from market competitive electricity pricing designed to deliver long term value.

Consumer Protection

ASENSO is an Authorised Electricity Retailer operating under Australia's energy laws. Residents receive the same consumer protections, complaint handling processes and regulatory oversight expected from any authorised electricity retailer.

Future Ready

The Community Energy Network has been designed to support future technologies including:

- + Rooftop Solar
- + Home Battery Systems
- + Electric Vehicle Charging
- + Future Community Energy Initiatives

As technology evolves, the network is designed to evolve with it.

What Does This Mean for Me?

- + Purpose-built community electricity network
- + 100% GreenPower supplied at no extra cost
- + Reliable electricity backed by South Australia's electricity grid
- + Market competitive electricity pricing
- + Ability to install rooftop solar (subject to connection approval)
- + Ability to install home battery systems (subject to connection approval)
- + Future-ready infrastructure designed for evolving energy technologies

Benefits of the Embedded Network

-  100% Green Power
-  Competitive Pricing
-  Reliable Power
-  Solar Ready
-  Future Ready
-  Protected
